CHRIS Screenings_Evaluations Report

The CHRIS Project has released a new report available in the Standard Reports section of the CHRIS Database. Patricia Adams, M.Ed., the coordinator of ESE Special Projects for the FDLRS Administration Project, said the following:

“The new CHRIS Screenings_Evaluations report is an important tool for ensuring efficient case management so preschool aged children who are suspected of having a disability can be evaluated and potentially found to be eligible for services within mandated timelines. Local FDLRS Associate Centers begin the process by conducting initial developmental screening and then refer families to local school districts who complete the evaluation process. This report captures timeline data in a new way allowing for easier progress monitoring and coordination.”

This report should only be used by the individual FDLRS site’s Data Facilitator or Manager. If you would like more information on running or interpreting the report, please visit the Reports page of our website under the Training tab to view the Screenings_Evaluations Report Training Video.

If you have any further questions, please do not hesitate to contact The CHRIS Help Desk.
